Skills

- C++ / C# / C / JavaScript / Ruby
- Unreal Engine 5 / Unity
- Unreal Blueprints
- Gameplay Ability System (GAS)
- Multiplayer Networking / Replication
- Client-Server Architecture
- Cross-Platform
- Console Development
- Live Service Systems
- Graphics Programming
- Shader Development
- OpenGL / Vulkan
- UI Programming / MVVM / UMG
- Chaos Physics / SDL3 / Gameplay Frameworks
- Tools Development / Gameplay Tools
- Backend Integration
- Optimization / Profiling / Debugging
- Design Patterns
- SOLID Principles
- Scalable Systems Design
- Technical Documentation
- Code Reviews
- Multiplayer Server Development
- Microservices Architecture
- AI Systems / State Machines
- Perforce / Unity Version Control
- Git Version Control
- Linear Algebra / 3D Mathematics

Education

FATEC Americana — University of Technology of Americana

Digital Games Technology

02/2018 - 12/2020

Professional Summary

Software Engineer focused on gameplay systems, multiplayer networking, UI development, and scalable game architecture using Unreal Engine 5 and Unity. Experienced developing cross-platform and live service projects with expertise in C++, C#, replication, backend integration, graphics programming, shader development, and gameplay frameworks. Proven ability to contribute across the entire production pipeline delivering maintainable, high-performance, and scalable gameplay systems for PC, consoles, and mobile platforms.

Work History

Blue Gravity Studios — Unreal/Unity Developer (C++/C#)

12/2023 - 12/2025

Developed gameplay systems and multiplayer features using Unreal Engine and Unity across multiple cross-platform projects targeting PC, consoles, and mobile platforms. Worked extensively with Gameplay Ability System (GAS), MVVM architecture, Chaos Physics, UI systems, replication, and multiplayer server development. Contributed to backend integrations, graphics programming, shader development, and custom editor tooling while focusing on scalable architecture, maintainable code, and efficient development workflows.

Eduplation — Unity Gameplay Developer (C#)

12/2021 - 08/2023

Developed gameplay, UI, and online systems in Unity for a live-service educational mathematics game, contributing across both gameplay architecture and backend infrastructure. Implemented friendship and social systems, backend integrations, scalable microservice-oriented patterns, and gameplay UI workflows while maintaining clean and extensible code architecture.

Virtual Arts Studio — Unity Developer (C#)

06/2020 - 12/2021

Developed cross-platform puzzle games in Unity as the sole programmer, being responsible for the full technical implementation across gameplay systems, UI, integrations, and platform support. Integrated Tilt Five augmented reality technology and contributed to tooling, optimization, and deployment workflows.

Monde Sistemas — Ruby on Rails Developer Intern

05/2019 - 05/2020

Contributed to the backend development and maintenance of a travel agency management system using Ruby on Rails. Worked with TDD practices and automated testing tools including RSpec and Capybara while improving code quality, maintainability, and backend workflows.
